The following is an examiner's statement of reasons for allowance:

Three properties, as claimed, support distinction over the prior art. First, the claims require a hydrogel comprising about 0.5% to 3.5% of polyacrylamide by weight based on the total weight of the hydrogel. Lim. on the other hand, discloses hydrogels containing approximately 30% to 40% solid weight content. Second, the claims requires the hydrogel having a complex viscosity from about 2 to 90 Pascal which provides for a colloidal solution. Lim does not disclose a specific complex viscosity; however, a solid hydrogel which would have a complex viscosity approximately 100 times greater. Third, the claims require a molar ratio of acrylamide to methylene bis-acrylamide (i.e., monomer to cross-linking agent) of 150:1 to 1000:1. On the contrary, Lim discloses a cross-linker greater than the amount of monomer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
